Auckland Water Crisis Sustainable Car Wash Supply

Who: Z

Products: Multiple 5,000 LTR Slimline Water Tanks

Where: Z service station car washes across Auckland

What: With the water restrictions imposed across the Auckland region following two dry summers leaving the water supply dams 25% less than usual, Z responsibly took the opportunity to become more self-sustainable by ensuring only harvested rainwater is used in car washes.

Promax Slimline Tanks are perfectly suited as not only do they look great and are easy to install, but having the connections hidden away in the integrated pump cover and with in-built seismic restraints means the high safety requirements of service stations isn't compromised.
